

## Fused Safety / Disconnect Switches

Power Temp Systems, Inc. offers Fused Safety / Disconnect switches that are designed to provide an additional safety between the power source and the load. These switches are lightweight and compact which make them ideal for the concert, sound and lighting industry, in addition to various portable power applications.

These rugged and durable switches are constructed similar to the Original Series™ portable power distribution panels, and thus are designed, engineered, and built to withstand any of the problems typically associated with the transportation of portable equipment. Standard features include an exclusive designed steel stackable mounting stand with a durable polyester powder coat finish (OSHA Safety Red) with pneumatic tires, wheels, handles, and a center point lifting bracket for complete mobility. These switches can be configured with various input and output connectors.

These switches are built and rated as “NEMA Type 3R Weatherproof for Outdoor Use”, however they can be configured for “NEMA Type 1 Indoor Use Only” upon request. To meet special requirements or applications custom configurations are available.

Model Number	Power Input	Power Outlets	Input Cable Required
D100	400 Amp, 600V 3Ø, Cam Type Male	400 Amp, 600V 3Ø, Cam Type Female	Cam-Type
D200	400 Amp, 600V 3Ø, Cam Type Male	400 Amp, 600V 3Ø, Cam Type Female	Cam-Type
D400	400 Amp, 600V 3Ø, Cam Type Male	400 Amp, 600V 3Ø, Cam Type Female	Cam-Type
